Block DNS to get only P2P matches in league
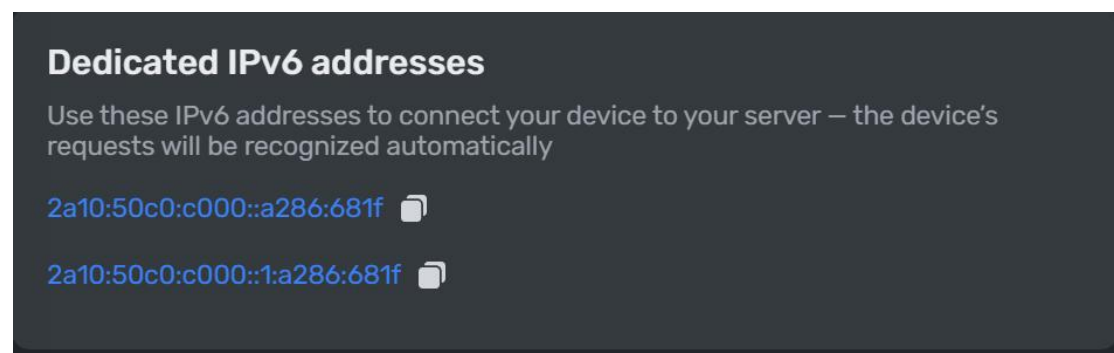

shared in https://t.me/eFootballxjbt

> create account on www.adguard-dns.io
> add user rule in "server settings", block googleusercontent.com
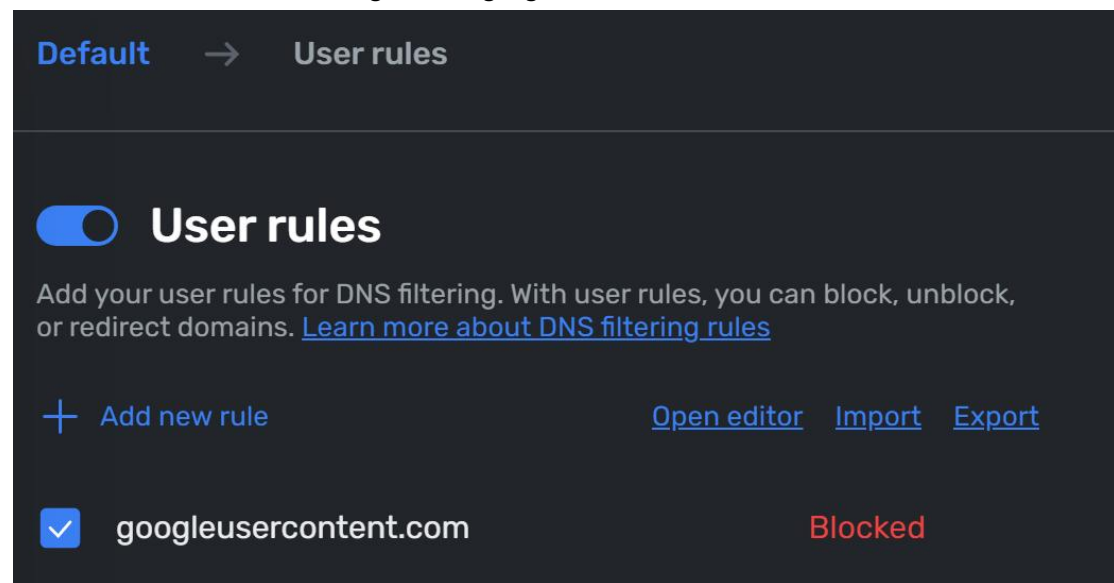

> Create new device, and find your own dedicated IPV6. Img below is for example.

>configure these IPV6 DNS into your local network settings.

and use cmd " nslookup www.googleusercontent.com" to test. If it return an invalid address immediately, it means the configuration is successful.

>In the game, you will often get "No Opponent Found" prompt since there are few p2p players. Sometimes it's very quick to get a match.

No Opponent Found

Changing your Matchmaking Settings may make it easier for you to find opponents.

OK
